

#### ADOBE DOCUMENT GENERATION SOLUTIONS

Adobe LiveCycle Print is part of Adobe's document generation solutions that improve your organization's ability to deliver high-impact customer communications. From dynamically generating documents based on data stored in core systems to converting existing content to Adobe PDF files, Adobe helps you streamline the document generation process.

#### A COMPLETE DOCUMENT PRINTING SOLUTION

Start by using Adobe LiveCycle Designer to easily create XML document templates. Combine intelligent information capture and form automation capabilities with Adobe LiveCycle Forms. Complete your customized communications solution using Adobe LiveCycle Print by merging variable data with templates for personalized, dynamic document printing in a variety of languages.

# Adobe® LiveCycle™ Print

## Simplify customized document printing

With Adobe LiveCycle Print, integrating customized document printing into your customer communications workflow just got easier. Adobe LiveCycle Print enables IT managers to automate the composition of complex, dynamic documents using variable data based on customer information and business rules. Customer service representatives can then provide better and faster service when high-quality documents are critical to business workflows.

With Adobe LiveCycle Print, you can:

- Automate customized document printing
- Integrate print output into existing communications workflows
- Extend Adobe LiveCycle process management solutions

### Print dynamic documents and forms

Adobe LiveCycle Print software automates the printing of dynamic documents and forms, such as mortgage applications, service contracts, and policy renewals. Your organization can increase the quality of customer communications while reducing the resources required to manually compile these documents.

With Adobe LiveCycle Designer, business analysts and designers are empowered to create dynamic document and form templates with personalized branding elements that include logos and graphics. These templates can be merged with data to provide automated printing using Adobe LiveCycle Print. The flexibility of Adobe LiveCycle Print allows for the generation of documents using single or multiple dynamic templates with highly variable data.

### Integrate print output into your existing workflows

Adobe LiveCycle Print enables you to combine form templates and XML data directly into Printer Control Language (PCL) or PostScript® documents for laser printing and into Zebra format for label printing. When mailing or distributing documents is part of your outbound communications strategy, you can include formatted documents as a step in an Adobe LiveCycle Workflow process.

## SYSTEM REQUIREMENTS

Built on Java™ Platform, Enterprise Edition (Java EE), Adobe LiveCycle Print integrates easily into enterprise infrastructures through Java APIs and support for web services protocols. The software must be used in conjunction with Adobe LiveCycle Forms 7.1 and supports market-leading enterprise operating systems, application servers, and databases. For detailed product-specific platform support and system requirements, visit [www.adobe.com/products/server/livecycleprint/systemreqs.html](http://www.adobe.com/products/server/livecycleprint/systemreqs.html).

## Adobe LiveCycle Print in action

Integrate customized printed communications into your existing business process with Adobe LiveCycle Print.

### Adobe LiveCycle Print and new account correspondence

Branch representative captures information from customer using an interactive account enrollment form.

Customer information is merged onto the account application document and automatically printed for the customer to sign.

Representative prints a transaction receipt and personalized welcome package to deliver to the customer.

Adobe LiveCycle Print simplifies document printing and automates customer communications. Personalized documents can be printed at any time during business processes—either on demand or as part of an automated batch process.

## COMPLEMENTARY PRODUCTS

- Adobe Acrobat® family

- Adobe LiveCycle Workflow
- Adobe LiveCycle PDF Generator

## FOR MORE INFORMATION

For more information about Adobe LiveCycle Print and the complete line of Adobe LiveCycle products, visit [www.adobe.com/products/server/main.html](http://www.adobe.com/products/server/main.html).

## Extend your Adobe LiveCycle process management solution

Adobe LiveCycle software provides an end-to-end solution to help you streamline business processes and enhance customer communications.

### Design with Adobe LiveCycle Designer

Create sophisticated forms that can be deployed as Adobe Portable Document Format (PDF) or XML Data Package (XDP) files using a point-and-click XML form design tool. The easy-to-use interface enables form authors to quickly create and maintain form templates, define a form's business logic, make changes, and preview the document before it is deployed.

### Automate with Adobe LiveCycle Forms

Intelligently capture information to automate form-driven business processes. Whether users are online or offline, internal or external, Adobe

LiveCycle Forms lets organizations deploy secure XML-based forms as Adobe PDF or HTML over any platform or device—from PCs to handhelds. Adobe LiveCycle Forms also generates documents by merging data from enterprise systems with templates created in Adobe LiveCycle Designer.

### Orchestrate with Adobe LiveCycle Workflow

Streamline, integrate, and secure document-centric business processes within and beyond the firewall. Through the unique component-based architecture of Adobe LiveCycle Workflow, both business and IT professionals can visually assemble end-to-end workflows that unify people, systems, documents, business rules, and web services.
