

# Anonymizer® Enterprise Chameleon™

## The most trusted solution for secure OSINT online

- Ensure access to online intelligence
- Protect the integrity of information collected
- Shield the confidentiality of analysts

### Risks to Gathering Open Source Intelligence on the Internet

*They know who you are – but you don't know that you've been exposed!*

*Your targets have identified your IP Address as an investigative unit of the US government and are redirecting you to a cloaked web site displaying fake information. You are also at risk of falling prey to their "honey pot" scheme. Your operation and potentially your safety have been compromised.*

IP addresses uniquely identify computers so that Web sites can communicate with visitors. The IP address allows Web sites to recognize each visitor by their geographic location, Internet service provider (ISP), operating system, and even the user's language.

Lists of IP addresses assigned to government agencies are readily available on the Internet. Current technology enables nefarious Web site administrators to flag your agency's IP addresses. With this information, they can:

- Block access to their Web sites or specific pages
- Redirect agents to cloaked Web sites displaying false information
- Attract agents to "honey pot" Web sites

### The Anonymizer Advantage

*Anonymizer, Inc. is the global leader in online privacy and identity protection solutions. The company's core competency is non-attribution and its world-class consumer, enterprise, and government solutions are second to none. Because of Anonymizer's hardened networks, redundant connections, and strict internal procedures, the company has been able to weather everything from hacker attacks to government-sponsored intrusion teams. Providing non-attributions since 1995, Anonymizer has never experienced a security breach and it has ensured a safe and secure Internet for millions of users and billions of Web pages.*

### For Analysts within the Enterprise Walls:

*Anonymizer's Enterprise Chameleon is a network tool that provides users true anonymity on the Internet. Empowered with true identity protection, Enterprise Chameleon gives agents and analysts unfettered access to target Web sites, ensuring data integrity without tipping off the target.*

*"Terrorists continue to strengthen their organizations through sophisticated use of the Internet to collect and exchange intelligence, spread propaganda, raise funds, and recruit new members."*

*— U.S. Info, June 2006*

### Proven Identity-Protection Solutions

Anonymizer non-attribution solutions mitigate these threats by providing government users true anonymity on the Internet, thereby completely shielding your network identity from terrorists, hackers, or others who have intentions of ill will against the organization.

## Anonymizer® Enterprise Chameleon™ Features & Benefits

*Enterprise Chameleon* ensures data integrity by providing your analysts with IP addresses and domains that remain unrecognized by the target Web site. When a Web administrator attempts to identify your domain name or IP address, it blends discreetly into the general visitor population, in a “Chameleon-like” fashion.

### ▪ Complete Non-Attribution

*Enterprise Chameleon* prevents others from tracing a user’s identity, and keeps your agency’s identity protected. This enables your users to access target sites without being blocked or spoofed, thus ensuring data integrity.

### ▪ Fast Internet Connections

Using dedicated servers, *Enterprise Chameleon* ensures a fast, flawless Internet connection with very high availability for a positive and seamless user experience.

### ▪ IP Control

Domains and IP addresses are available only to vetted and licensed subscribers. These enterprise-class solutions are not available to the general public.

### ▪ IP Rotation

*Enterprise Chameleon* changes the user’s IP address on a daily basis, ensuring an IP will not get burned. Custom rotation schedules are available to meet stringent requirements.

### ▪ Hardened Security

Users access the Internet through a series of private servers and proxies that never write any data to disk. Because information is never recorded to any network server, Anonymizer can guarantee its customers complete user privacy and security, even in the unlikely event of a breach situation.

### ▪ Secure Connection

The *Enterprise Chameleon* protects the customer’s connection to Anonymizer with triple-DES or AES encryption, which ensures the integrity and privacy of confidential, secure, or secret information.

### ▪ Scalable Solution

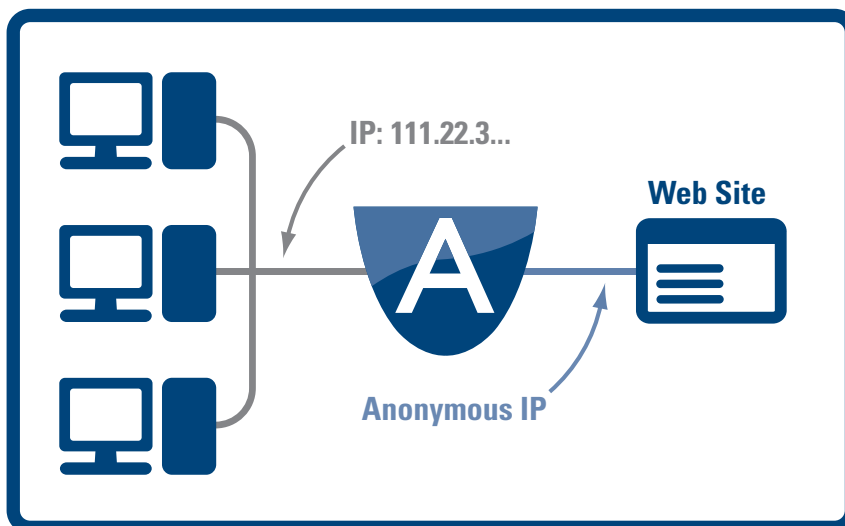

Whether you need to protect a few analysts, a full department, or your entire organization, *Enterprise Chameleon* easily accommodates your current and future requirements.

### ▪ Ease of Deployment

The *Enterprise Chameleon* technology is server-side and platform-independent. There is no client software to download or install, and no need to adjust end users’ system configurations.

### ▪ Traffic Mixing (optional)

*Enterprise Chameleon* blends your Internet traffic with traffic from millions of users from outside your organization, preventing other Web sites from profiling your users based on their IP addresses.
