

Anonymizer® Geographic Distribution™

- Camouflage your IP country of origin, operating system, language, and time zone
 - Blend in seamlessly with the foreign national's e-traffic
 - Scalable to meet any level of security requirements

Risks to Gathering Open Source Intelligence on the Internet

IP addresses uniquely identify computers so that Web sites can communicate with visitors. The IP address allows Web sites to recognize each visitor by their geographic location, Internet service provider (ISP), operating system, and even the user's language.

Even if this analyst protects their IP address, they can still be blocked on their geographic location. Web site administrators can identify visitors from the United States and present misleading information, or block access altogether.

Lists of IP addresses assigned to government agencies are readily available on the Internet. Current technology enables nefarious Web site administrators to flag your agency's IP addresses and redirect your analysts to a cloaked Web site that displays false information. Hackers can even automatically launch a distributed denial of service (DDOS) attack through the workstation or laptop to your agency's servers.

Proven Identity-Protection Solutions

Anonymizer non-attribution solutions mitigate these threats by providing government users true anonymity on the Internet, thereby completely shielding your network identity from terrorists, hackers, or others who have intentions of ill will against the organization. Using geographic anonymity, agency analysts can gain unfettered access to target Web sites, ensuring data integrity without tipping off the target.

The Anonymizer Advantage

Anonymizer, Inc. is the global leader in online privacy and identity protection solutions. The company's core competency is non-attribution and its world-class consumer, enterprise, and government solutions are second to none. Because of Anonymizer's hardened networks, redundant connections, and strict internal procedures, the company has been able to weather everything from hacker attacks to government-sponsored intrusion teams. Providing non-attributions since 1995, Anonymizer has never experienced a security breach and it has ensured a safe and secure Internet for millions of users and billions of Web pages.

For Analysts Needing to Hide their Geographic Location:

Anonymizer Geographic Distribution provides users the ability to change the information that Web administrators see through even the most sophisticated network analysis tools. *Geographic Distribution* enables users to completely camouflage identity by customizing their IP information with the following criteria:

- Country of origin
- Operating system
- Language
- Time zone

Thus, users could appear as if they are located in Cairo, and all of the corresponding information would be provided seamlessly.

Anonymizer develops *Geographic Distribution* locations for each customer's unique requirements. This solution is the perfect complement to *Anonymizer Enterprise Chameleon*.

"Access to and protection of intelligence information is essential for national security and the need to do this well can't be understated."

— John G. Grimes, ASD NII and CIO,
U.S. Department of Defense

Anonymizer® Geographic Distribution™ Features & Benefits

Anonymizer Geographic Distribution ensures data integrity by providing your analysts with IP addresses that appear as though they are from a city or country that appears harmless or friendly to the target site. In addition to enabling users to select a “neutral” or “insider” city, state, or country of origin, *Geographic Distribution* also changes the operating system, language, and time zone to transparently match the header information that is consistent with that region. When a Web administrator attempts to identify your organization’s domain name or IP address, your users are not tagged as risks, and are welcomed.

▪ Complete Non-Attribution

Geographic Distribution prevents others from tracing a user’s geographic origin, operating system, original language, and even time zone. This keeps your organization’s true identity and location protected, thus enabling your users to access target sites without being blocked or spoofed. This ensures the integrity of data gathered.

▪ One-Click Access

Geographic Distribution users are able to change their apparent physical location and corresponding header information with the click of a button in their Internet browser. All settings automatically update, making *Geographic Distribution* user friendly and convenient.

▪ Not Just Spoofed

Traffic actually comes from an Anonymizer controlled point of presence in the country.

▪ IP Control

Domains and IP addresses are utilized only by vetted and licensed subscribers. These enterprise-class solutions are not available to the general public.

▪ Locations Developed for Your Requirements

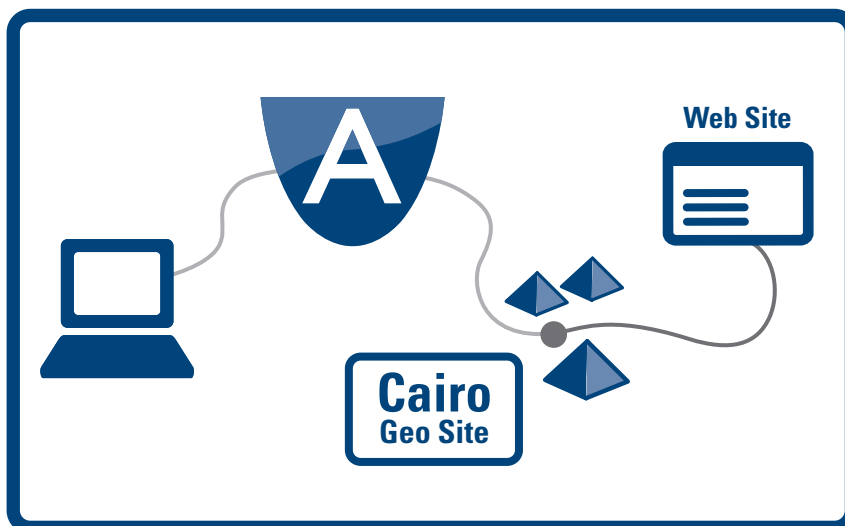

Anonymizer develops *Geographic Distribution* locations for each organization’s unique requirements.

▪ Scalable Solution

Whether you need to protect a few analysts, a full department, or your entire agency, *Geographic Distribution* easily accommodates your current and future requirements.

▪ Ease of Deployment

The *Anonymizer Geographic Distribution* technology is server-side and platform-independent. There is no client software to download or install, and no need to adjust end users’ system configurations.
