

Carbonetworks™ helps organizations optimally achieve sustainability goals by transforming energy, GHG, and sustainability initiatives into measurable business results. Our solutions manage all areas of sustainability management including energy, greenhouse gas, water, waste, and supply chain. Carbonetworks software and services enhance your competitive advantage and corporate brand by uncovering new opportunities to reduce costs, mitigate risks, and grow revenue. The largest carbon management network in the world, Carbonetworks helps over 8,000 facilities around the world manage their sustainability initiatives, and has been building software to help organizations manage and reduce their carbon emissions and energy consumption for over a decade.

Carbonetworks™ Information Manager (CIM)

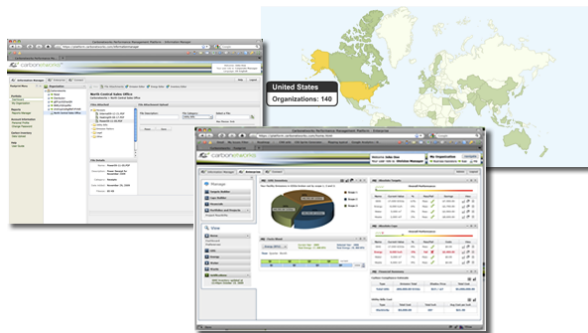

CIM enables organizations to manage and report sustainability information across the enterprise, and includes both inventory and reporting capabilities for energy, GHG, water, waste, and other sustainability metrics. CIM integrates into existing and legacy software to ensure seamless data transfer and leverage your existing infrastructure investments.

"As a company serving the agricultural and horticultural sectors, we are committed to sustainability and sensitivity to the environment. We were looking for a scalable way to accurately capture and measure all our energy and emissions reduction activities to ensure compliance with any change in statutory regulations, manage carbon at an enterprise level and participate in the global carbon network."

*Daniel Krohn, Energy & Carbon Specialist
Becker Underwood*

Carbonetworks™ Enterprise

Carbonetworks™ Enterprise is the most widely deployed business intelligence platform for sustainability management in the industry. It helps organizations makes decisions about their energy and GHG inventories and find the most cost-effective ways to reduce. Carbonetworks™ Enterprise provides analytical capabilities to execute scenario planning, risk assessment and forecasting to understand the impact of sustainability initiatives.

Carbonetworks™ Connect

A collaborative online platform where companies seeking carbon and energy reductions can connect with organizations that provide the reductions they need. From green lighting projects to datacenter virtualization to carbon offsets and consulting, Carbonetworks™ Connect automatically delivers qualified reduction projects to the companies that need them as part of their overall sustainability strategy. All managed on the Carbonetworks™ Performance Management Platform.
