The First All-In-One Secure KVM and Zero Client Cross Domain Solution

Following in the tradition of purpose-built solutions for Federal and DoD customers, ClearCube's ClientCube is the first endpoint that consolidates multiple networks into one device at the desktop, while maintaining physical network separation to centralized computing resources in the datacenter. VMware View and BladePC workstations can now be isolated and secured in the datacenter without compromising the user experience or network security at the desktop. Co-developed by ClearCube and Belkin, this sleek all in one unit integrates ClearCube's secure stateless zero client devices with Belkin's NIAP-approved secure KVM (keyboard-video-mouse) switch to create a multi-network workstation like no other.

World's First VPN Capable Zero Client for VMware View Desktops

Take advantage of full performance VMware View virtual desktop solutions unhindered by additional hardware with the VPN enabled ClearCube Secure Cloud Desktop 9520 Zero Client. ClearCube's new CD9520 Zero Client extends the capabilities of traditional zero clients from the LAN to the WAN to enable truly secure remote access virtual computing. Leveraging existing IPSec security gateways, the CD9520 fits seamlessly into your remote access paradigm while migrating the user into the VDI.

Quad Monitor, High End PC Experience in Centralized Computing

Announcing the newest revision of our award winning quad monitor PCoIP zero client. The new I9440 now features our ruggedized metal chassis for improved cooling, handling, and EMI performance. The I9440 Zero Client offers the only quad monitor, full PC experience for centralized computing using PC-over-IP™ technology with a single IP Address. Users can take advantage of full performance desktop computing solutions that are unhindered by distance with the quad monitor capable ClearCube® Technology I9440 Zero Client and centralized PC blade. The new ClearCube Technology I9440 Zero Client shatters distance and performance barriers that have been associated with centralized computing solutions. The I9440 Zero Client enables organizations to centralize computing resources for high end users, helping to ensure proper disaster recovery practices, increased IT security and reduce IT management costs.
