

Symantec™ Hosted Mail Security

Hosted email security solution protects against spam, email-borne viruses, and other unwanted content without requiring software or hardware installation

You should NOT have to...

- Divert IT resources to get better protection
- Expend capital on new or upgraded hardware
- Waste time managing software/hardware

You SHOULD be able to...

- Allow IT resources to focus on supporting business goals
- Reduce infrastructure load and costs
- Stay in control

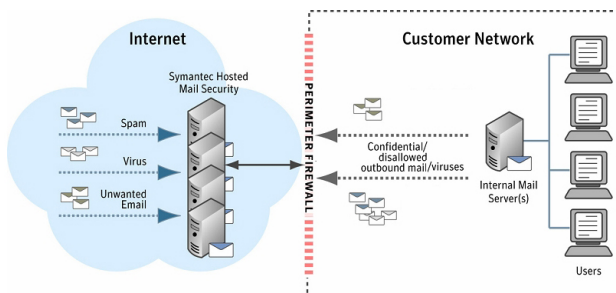

Symantec Hosted Mail Security provides spam, virus and content filtering without requiring onsite hardware or software. Hosted by Symantec, the solution features award-winning Symantec Brightmail™ AntiSpam and AntiVirus™ technologies. The Symantec Brightmail AntiSpam™ engine delivers greater than 97 percent effectiveness and a critical false positive rate of less than one in a million, making it one of the industry's most accurate solutions.¹

Administrators can customize mail policies by user or group. Quarantine management is simplified with both administrator and end-user quarantines accessible via the console and automated email digest reports sent to users' in-boxes. The spam quarantine email report provides options to allow end users to manage their quarantined email freeing IT managers from having to address individual quarantine issues.

Secure browser-based access allows administrators to set and enforce email security policies, while content compliance features make it easy for organizations to control sensitive email content and enforce content rules to conform to IT, HR, or regulatory requirements.

Key benefits

- Powered by industry-leading Symantec Brightmail AntiSpam and Symantec AntiVirus technologies for effective spam and virus protection
- Saves money by offering comprehensive email protection *without* requiring on-premise hardware, software, or ongoing administration and maintenance
- Reduces burden on messaging environment by stopping spam, viruses, and other unwanted content before they enter the network
- High accuracy allows customers to safely delete spam without review—no need to double-check quarantines for false positives
- Administrator and end-user quarantine allows end users to manage their quarantined email and frees IT managers from having to address individual quarantine issues

1. InfoWorld 2007 Technology of the Year Award winner for Best Anti-Spam Solution.”

An In-the-Clouds service

- Comprehensive protection against spam, viruses and other unwanted content in a hosted deployment
- Requires no on-site hardware, software, internal expertise or ongoing maintenance
- Symantec offers the scanning infrastructure and provides the scanning services
- Powered by Brightmail AntiSpam and Symantec AntiVirus technologies

Key features**Multi-layered spam protection**

- Uses Symantec Brightmail AntiSpam multi-layered technology to maximize detection rates without impacting legitimate messages

Proven virus protection

- Designed to provide high-performance, integrated virus protection of inbound and outbound email using Symantec AntiVirus technologies
- Employs intelligent heuristics allowing for early detection of new viruses

Email content filtering

- Attachment blocking and encrypted file handling policies can be established for additional protection against risks
- Subject line and message body filtering helps administrators control sensitive email content and enforce content rules to conform to Information Technology (IT), Human Resources (HR), and regulatory policies

Sophisticated spam quarantine

- Spam quarantine report can be delivered to all or some users via email automatically
- Spam quarantine provides end-user access or administrator-only and can also be accessed via a Web browser

Flexible policy management

- Spam, virus and filtering policies can be established for domains, users or groups of users

Transport Layer Security (TLS) support

- Maintains TLS connection for transmissions between customers and trading partners - helps organizations comply with legal, regulatory, and corporate compliance objectives

Centralized management

- Provides secure browser-based access for setting and enforcing email security policies, generating reports and management of multiple email domains

Graphical reporting

- Summaries and detailed statistics clearly highlight service efficiency and impact

Localized end user facing content

- Spam quarantine report email, end user manual and end user Web console available in French, Italian, German, Spanish and Japanese—reduces IT support by providing content and management tools in a language that is familiar to end users

Symantec™ Hosted Mail Security

System requirements

Management of the service is via a secure Web connection using one of the following browsers:

- Microsoft® Internet Explorer® 6 or 7
- Firefox® 1.5 or 2
