

# SentinelOne For Public Sector

As a government and a public sector organization, you face varied and complex challenges. You deliver multiple and wide-ranging services to diverse communities and you do it, often constrained by limited headcount and budgets.

Society demands digital transformation everywhere. Users expect more and more immediate, mobile access to government services. People need fingertip access to their data and to consume services from passports and driving licenses to planning permission and refuse collections.

The threat actors you face are equally wide-ranging, from Ransomware and cybercriminals looking for the valuable data you hold, through to state-sponsored meddling and any local hacktivist with a grudge.

You have more data stored across networks that are expanding beyond traditional controls. You probably have legacy or aging infrastructure and a lack of visibility and control over smart, unsupported and rogue devices.

## SentinelOne understands your unique challenge and has the solution.

### **I need to protect against ransomware and advanced malware. Traditional antivirus doesn't work.**

SentinelOne is NGAV + EDR in one agent. Sentinel agents protect Windows, Mac, and Linux computers and servers from malware, ransomware and fileless attacks.

### **I need to understand and control public device access, IoT and know who is on my network.**

SentinelOne helps you mitigate vulnerabilities, discover unmanaged devices, reduce your attack surface and hunt rogue devices.

### **I need to secure aging, legacy computing infrastructure including OSes no longer officially supported by the manufacturer.**

SentinelOne supports all modern Windows versions as well as legacy, end-of-life versions including Windows 7, XP, Server 2003 & 2008.

### **I need to overcome staffing skills gaps and improve Detection & Response.**

SentinelOne is noted for its ease of use and administrative workflows that help up-level novice administrator skills. We also offer FedRAMP compliant services to assist organizations.

### **I need to provide compliance for a range of regulations and protect huge volumes of sensitive data.**

SentinelOne is a strong technical control component and satisfies endpoint security control mandates for NIST, FISMA, PCI-DSS, HIPAA, ISO and others.

# Many capabilities - one agent, one console

## SentinelOne delivers:

- Next-gen AV protection against malicious threats, including malware, ransomware, and fileless attacks.
- Sophisticated EDR tools, behavior-based threat detection, prioritization, and response tools.
- Continuous assessment and protection from unauthorized and unmanaged IoT devices.
- Vigilance Managed Detection and Response (MDR) services. 24x7x365 expert cybersecurity analysts to supplement your security personnel, ensuring a swift response to threat detections.
- SentinelOne Readiness deployment and ongoing quarterly ONEScore health checks to ensure your SentinelOne installed base is configured to peak operational effectiveness.

**SentinelOne has been granted a FedRAMP Moderate certification Authority to Operate by its sponsor agency with full PMO sign-off expected Q3-2020.**

**Very flexible management capabilities in addition to strong EPP/EDR features.**

Gov't/PS/ED 5,000 - 50,000 Employees  
Mar 13, 2020

**Just give SentinelOne a try and you will be sold! By far one of the Best on the Market!**

Gov't/PS/ED <5,000 Employees  
Dec 2, 2019

**Configuration and rollout was extremely easy. The cloud dashboard is simple to use.**

250M - 500M USD  
Jul 2, 2020

**Easy to use, great threat-hunting capabilities.**

Gov't/PS/ED <5,000 Employees
