

Radiant Logic Federated Identity and Directory Service Establishes Market Leadership in Large Identity Integration & Digital Transformation Projects

Company Marks Solid Growth and Profitability in 2018

LAS VEGAS, NV, December 3, 2018: Radiant Logic will demonstrate the latest version of its enterprise-grade RadiantOne Federated Identity and Directory Service (FID) at the Gartner IAM tradeshow in Las Vegas from December 3-5, 2018. RadiantOne, the company's innovative identity integration platform, combines the flexibility and richness of virtualization with the power and scale of a big-data directory. Fortune 1000 companies use RadiantOne to solve critical identity integration issues, secure their DevOps after M & A, divestitures, and reorganization, and enable new application deployments.

"This year has been all about asserting our value for large scale and complex identity integration projects," says Michel Prompt, Radiant Logic Founder and CEO. "We've seen larger deployments than ever, thanks to the combination of our integration layer and HDAP, our big-data directory. Some of our long-standing customers in healthcare, insurance, banking, and retail are leveraging new ways to integrate, store, and scale identities from multiple sources for potentially millions of users, which is very exciting. We believe this takes RadiantOne far beyond the category of a point solution for identity integration, and toward a complete identity service."

"A federated identity and directory service enabled our integration team to take on new projects," says Mark Oehler, Identity Management Integration Analyst at Transamerica. "In the past, every new acquisition or change in business requirements meant potentially making modifications to every application, adding time and complexity. Identity virtualization let us consolidate our directory infrastructure, effectively removing integration as a critical roadblock for every new project, and gaining business agility."

In 2018, Radiant Logic maintained its consistent and profitable growth trajectory, increasing its revenue by 25%.

Use Case Extension for Identity Administration, Federation, and Cloud Provisioning

2018 has also been a transitional year for RadiantOne use cases and product extensions. Cloud-based directories are an increasingly vital component of the identity infrastructure. The ability to abstract, integrate, and transform complex identity data from disparate sources has proven to be an important tool for enterprises looking to secure, synchronize, and provision identities to the cloud. By consolidating multiple on-premises and cloud-based identity sources, RadiantOne simplifies both SSO and provisioning to cloud applications.

Companies are also using the federated identity and directory service to support policy-based orchestration and regulatory compliance. RadiantOne can now power essential IGA initiatives, enabling large and complex enterprises to reuse IGA identity warehouses as a central, integrated repository for other identity projects. It reduces integration time for leading IGA solutions by acting as a specialized connector for directories, enabling a feedback synchronization loop and a better ROI for provisioning

projects. Coupled with the scalable RadiantOne HDAP directory, the integrated identity hub supports an IGA platform's Customer Portal or Vendor Registration Management tools to build a superior customer experience, improve time to market, and drive digital transformation initiatives.

"IGA solutions excel at correlating and pulling together crucial information for auditing and compliance," says Dieter Schuller, VP of Business Development at Radiant Logic. "A federated identity and directory service can transform this distributed data into a unified directory, so you can provide a single, authoritative source of authentication and authorization for your WAM or federation portal. RadiantOne is helping customers to do more with their Identity Governance and Administration products they're already using."

Learn how Identity Integration & Virtualization Forms the Foundation for IAM

Radiant Logic will be at the Gartner IAM conference in Las Vegas from December 3-5, 2018. The conference will also feature a unique panel of Radiant Logic customers sharing their successes and cost-savings with RadiantOne. Representatives from Transamerica, General Electric and LinkedIn will discuss how they leveraged their existing directories to meet new business initiatives.

Don't miss this session on **Tuesday, December 4 at 10:15AM in Augustus I**, and **visit Radiant Logic at booth #201 at the Gartner IAM conference to get a demo of RadiantOne**, Radiant Logic's groundbreaking federated identity and directory service.

About Radiant Logic:

As the market-leading provider of federated identity systems based on virtualization, Radiant Logic delivers simple, standards-based access to all identity within an organization. The RadiantOne FID federated identity and directory service enables customizable identity views built from disparate data silos—along with scalable sync and storage—to drive critical authentication, authorization, and provisioning decisions for WAM, federation, cloud, and cloud directory deployments. Many Fortune 1000 companies rely on RadiantOne FID to deliver quick ROI by reducing administrative effort, simplifying integration and storage, and building a flexible infrastructure to meet changing business demands.
