

RadiantOne Federated Identity and Directory Service Now Available on Microsoft's Azure Marketplace

Because of its unique ability to integrate and synchronize on-premises identity data to Azure AD, RadiantOne FID has been included in Microsoft's online marketplace for cloud applications and services.

NOVATO, CA – September 18, 2018 – Radiant Logic (www.radiantlogic.com), the market-leading provider of **federated identity and directory solutions based on virtualization**, today announced that its flagship product, RadiantOne FID, has been included in Microsoft's Azure Marketplace.

Offering customers a place to discover, try and buy cloud software solutions built on Azure or built for Azure, the Marketplace is a solution catalog that spans several industry categories, and contains Azure building blocks like Virtual Machines, APIs, and Solution Templates, and SaaS Apps. RadiantOne eases the move to Azure AD cloud directory for companies & organizations with many diverse identity sources.

A key target for large companies and organizations is the ability to post and/or host all or part of their identity infrastructure in the cloud to provide ubiquitous and secure access to identity information to their applications. But to do this, today's sizable enterprises must integrate and rationalize their identity infrastructures.

Corporate identity systems are often the result of years of technological accumulation. They feature a conglomeration of disparate data silos made up of multiple directories, data sources, and protocols (such as LDAP, SQL, and web services). Identities are spread across many disparate data silos and the same identity often exists in more than one source. Companies need a layer that can abstract, rationalize and consolidate all their sources of identity and attributes (AD domains & forests, LDAP, SQL & APIs) before shipping part or all of this "image" to Azure AD.

“We designed RadiantOne FID to support the integration/consolidation effort, providing an identity hub and connectors ("spokes") that simplify cloud identity synchronization and provisioning,” says Michel Prompt, CEO and Founder of Radiant Logic. “We are pleased to be a player in the Microsoft cloud. And best of all, Azure Marketplace enables you to deploy RadiantOne with the touch of a button.”

Radiant Logic will be exhibiting RadiantOne FID at the upcoming Microsoft Ignite show, September 24-28 in Orlando Florida, Booth #227.

About Radiant Logic

As the market-leading provider of federated identity systems based on virtualization, Radiant Logic delivers simple, standards-based access to all identity within an organization. The RadiantOne FID federated identity and directory service enables customizable identity views built from disparate data silos—along with scalable sync and storage—to drive critical authentication, authorization, and provisioning decisions for WAM, federation, cloud, and cloud directory deployments. Many Fortune 1000 companies rely on RadiantOne FID to deliver quick ROI by reducing administrative effort, simplifying integration and storage, and building a flexible infrastructure to meet changing business demands.
